

Priya Raman

Austin, Texas | (512) 555 0147 | priya.raman@exampleemail.com | LinkedIn

Full-stack software engineer with 5 years of experience building and maintaining production web applications. I work primarily in JavaScript and TypeScript across React front ends and Node.js services, and I care a lot about APIs that are pleasant to consume and systems that are boring to operate.

Work Experience

Software Engineer — Northgate Systems

Mar 2023 – Present · Austin, TX

- Built and maintained customer-facing React applications used by roughly 40,000 monthly active users.
- Designed and shipped REST APIs in Node.js and Express, including versioning and deprecation policy.
- Migrated the main front end from JavaScript to TypeScript incrementally, cutting runtime type errors reported in production by about 60%.
- Introduced containerised local development with Docker, reducing new-engineer setup time from two days to about an hour.

Software Engineer — Callisto Retail Technology

Aug 2021 – Feb 2023 · Remote

- Developed order management features in a React and Node.js stack serving a network of 300+ retail locations.
- Built a REST integration layer between the order system and three third-party logistics providers.
- Set up CI/CD pipelines in GitHub Actions covering test, build, and staged deployment.
- Reduced average API response time on the busiest endpoint from 850ms to 210ms through query optimisation and caching.

Junior Software Engineer — Harbourline Digital

Jul 2020 – Jul 2021 · Austin, TX

- Contributed React components and Node.js endpoints to client projects across e-commerce and logistics.
- Wrote and maintained unit and integration tests; raised coverage on the shared component library from 34% to 78%.

Technologies and Languages

Languages: JavaScript, TypeScript, HTML, CSS, SQL

Frameworks and libraries: React, Node.js, Express, Jest, React Testing Library

Tools and platforms: Git, REST APIs, Docker, GitHub Actions, AWS (EC2, S3, Lambda), PostgreSQL, Redis

Practices: CI/CD, code review, automated testing, incremental migration

Education

B.Sc. Computer Science, University of Texas at Austin · 2016 – 2020

Projects

- **Tidewater** — an open-source REST API scaffolding tool for Node.js, generating typed route handlers and OpenAPI documentation from a single schema definition.
- **Rowan** — a React component library with accessible form primitives, published to npm and used across three internal projects.
- **Postmark Queue** — a small job queue built on Node.js and Redis, with retry backoff and a dead-letter queue, containerised with Docker.
